

# How to Measure Your Kitchen

## How to Measure Your Kitchen!

To find the approximate linear feet of your kitchen, measure the total length of cabinets you have on each wall at its largest point (see Example A).

Add all your measurements together to get your total linear feet (see Example B).

### Example A

### Example B

Measurement "A" + Measurement "B" + Measurement "C" = Total Linear Feet

9 Feet 3 Inches + 10 Feet 4 Inches + 10 Feet 8 Inches = 30 Feet 3 Inches
